Summary

Web Developer with 6+ years of experience in Ruby and Ruby on Rails.

Employment

Shopify (Remote / Tokyo) — *Developer*

2018 April — 2019 August

Helped Shopify expand globally. Application development on Translation Platform. Product development involves new features, bug fixes, Internationalization, Localization, Compliance, and feature migration for the Storefront and Admin products. Maintained ruby libraries, local payment gateways, GraphQL API endpoints, improved test suite stability, public help documents, internal Wiki, contributed to internal documents and discussion forum, and code automation for team collaborations. Presentation at offsite.

Cookpad (Tokyo) — D*eveloper*

2016 November — 2018 January

Helped Cookpad expand globally. My work involves upgraded Ruby on Rails of the main application and new market expansion development. Completed four Data Migrations with minimum overhead and zero downtime in a timely fashion for company acquisitions. Developed a progress report for migration, a retry mechanism for failures, programmatically check data integrity. Acquired site URI redirections. Migrated legacy password authentication to secure implementation. Assets migration to Amazon S3. Just In Time migration for active users.

Jolly Good Code (Remote) — *Developer*

2014 July — 2016 September

Delivered high-quality software and brought new products to market for clients by focusing on Minimum Viable Products, iteration in small steps, adjusted based on feedback. Practiced Test-Driven Development, Continuous Integration, and other Agile practices to ensure the quality. Built and deploy applications for end-user use (mostly on Heroku). Refactored and maintained legacy applications. Built internal applications and tools. Give back to the community by share learnings on engineering blog, contributing to Open Source and, and extract existing parts of the application into Open Source Libraries.
